SUMMARY

Software and automation engineer. I build systems that solve real business problems — cleanly, reliably, and at scale — with a growing focus on automation engineering, AI-powered workflows, and backend systems. I map how a process actually works, find where time is wasted, and engineer something simpler. Full-stack when it's needed (React / Next.js, Node.js/Express, Python/FastAPI), but a lot of the work is n8n / Make / Apps Script / Odoo wiring tools, data, and people together. Delivered a distributed rendering platform, a live university-festival platform that processed real payments, and multi-integration automation systems across HubSpot, Stripe, and DocuSign.

SKILLS

- **Languages:** TypeScript, JavaScript, Python, Java, SQL
- **Automation:** n8n, Make, Google Apps Script, Odoo, REST APIs, webhooks, HubSpot, Stripe, DocuSign, Slack API, Google Workspace APIs, SSLCommerz
- **Frontend:** React, Next.js (App Router), Redux Toolkit / RTK Query, TanStack Query, Zustand, Tailwind CSS, shadcn/ui
- **Backend:** Node.js, Express, Python, FastAPI, REST API design, WebSockets / Socket.io, JWT auth, RBAC, Zod, Prisma, mongoose
- **Databases:** PostgreSQL, MongoDB, Redis
- **Infrastructure:** Docker, Git, GitHub Actions, Vercel, Railway, Render, Hostinger, Netlify
- **Practices:** Reliability, maintainability, and business impact; modular / layered architecture, event-driven messaging (RabbitMQ), web scraping & data-processing pipelines

EXPERIENCE

Automation & Software Engineer

2026 – Present

PlugWheel

- Build automation systems designed around how businesses actually operate — connecting tools, data, processes, and people to cut repetitive work and operational friction.
- Wire CRM, lead-management, and communication workflows across HubSpot, Stripe, DocuSign, Slack, and Google Workspace using n8n and PostgreSQL as the system of record; focus on reliability, maintainability, and measurable impact as the client's operations grow.

Software Engineer Intern

Jun 2026 – Present

InfancyIT Limited, Sylhet, Bangladesh

Part-time, Hybrid

- Contribute to web application development using React.js and Node.js within a hybrid engineering team.

CSE Society, SUST

Sylhet, Bangladesh (On-site)

General Secretary

Sep 2026 – Present

- Lead organizational activities for the department's student society, coordinate the executive committee, and support academic and extracurricular programs.

Publication Secretary

Sep 2025 – Aug 2026

- Led publication and communication activities, increasing member engagement across platforms; developed communication and team-leadership skills.

PROJECTS

blend:it — Distributed Blender Rendering Platform

Aug 2025 – Sep 2025

React 19, TypeScript, FastAPI, Spring Boot, PostgreSQL, RabbitMQ, WebSockets, Docker

Team of 2

Repo: github.com/blendit-org

- Built the full React 19 / TypeScript single-page frontend (40+ views): auth with email verification, .blend upload with frame-range control, a live rendering-progress dashboard, an AI image/3D studio, and a real-time community hub; deployed on Netlify.
- Developed two FastAPI microservices — a Q&A + WebSocket chat service (SQLAlchemy, PostgreSQL) and a Stability AI text-to-image / image-to-3D service streaming multi-MB assets — integrated with a 9-service Spring Boot render pipeline (RabbitMQ, Google Cloud Storage).

SUST CSE Carnival 2026 — Event Registration & Operations Platform

Feb 2026 – Jul 2026

Next.js 16, Express, Prisma, PostgreSQL, Redux Toolkit, SSLCommerz

Team of 2

Repo: github.com/Uday2027/SUST-CSE-Carnival-2026 (+ -Backend)

- Co-built (about 140 of 568 commits) the platform that ran the university's flagship CS festival: public site, team registration with SSLCommerz/bKash payments, and an admin operations panel used on-site across multiple universities.
- Shipped features end to end (UI + API + schema): a support-ticket chat system, a per-segment FAQ module, a food-token pipeline generating printable PDFs, and a voucher system; migrated transactional email from SMTP to the Gmail REST API (OAuth2) to eliminate host timeouts.

Client Onboarding OS — Closed-Won to Kickoff Automation

Aug 2026 – Sep 2026

n8n, PostgreSQL, Next.js 16, Docker Compose, HubSpot, Stripe, DocuSign, Slack, Calendly

Solo

Repo: github.com/PlugWheel/Client-Onboarding-Operating-System

- Built an automation platform that turns a closed-won HubSpot deal into a provisioned delivery handoff: contract/deposit gating (DocuSign + Stripe), ClickUp/Drive/Slack provisioning, tokenized client intake with reminders, Calendly kickoff reconciliation, and SLA visibility — across 8 integrations.
- Designed 28 n8n workflows and a 13-migration PostgreSQL system of record with an enum-driven 13-state lifecycle, idempotent deal ingestion, persisted provider resource IDs, and per-provider retryable provisioning.

Cleanroom — Local Metadata Remover & AI-Text Detector

Aug 2026

Python (standard library), ExifTool, FFmpeg, mat2, Hugging Face Transformers, PyTorch

Solo

Repo: github.com/Uday2027/AI-Meta-Data-Remover

- Built a local-only web app that strips metadata from images, video, text, and Office/PDF files by rebuilding each format and verifying the result (decoded-pixel hashing, per-stream property checks), failing loudly on residual metadata; HTTP server on the Python standard library only.
- Integrated a RADAR-Vicuna-7B AI-text detector with sliding-window CPU inference, thread-safe lazy model loading, and language-aware abstention; added a fact-preserving OpenAI revision pass with an automatic no-op rejection check.

MoodMap — Real-Time Crowd Mood Map

Apr 2026 – May 2026

React, Vite, Leaflet, Socket.io, Express, Prisma, PostgreSQL, Redis

Solo

Repo: github.com/Uday2027/LIVE-Mood-Area

- Built a real-time anonymous city-mood map with live pin fan-out over Socket.io, crowd-verification credibility scoring, 2-hour auto-expiry jobs, and in-app OSRM routing; anonymous-but-accountable ownership via device-fingerprint sessions, Redis-backed rate limiting, and a Vitest + supertest service suite.

ZFR — Fashion E-Commerce Platform

May 2026 – Aug 2026

Next.js 16, React 19, MongoDB, Mongoose, NextAuth, TanStack Query, Zustand, Cloudinary

Solo

Repo: github.com/infiniton-tech/zfr

- Built a full storefront and admin CMS (about 17k LOC, 39 versioned REST endpoints): browse, cart, multi-step and guest checkout, live search, account area, an audit trail of admin actions, an analytics pipeline, and zone-based Bangladesh shipping.

EDUCATION

B.Sc. in Computer Science & Engineering

[GRAD YEAR]

Shahjalal University of Science and Technology (SUST), Sylhet, Bangladesh
